IE version, please? Also state your anti-virus application, any anti-spyware applications (except Defender), and any third-party firewall (e.g., ZA; Comodo).

ie7, Norton and ZA

...Further investigation pinned this on kB943460.

And how did you come to this conclusion? Did uninstalling 943460 stop the behavior?

By updating in pieces until the culprit was found. Confirmed by doing a fresh repair install w/ all updates BUT 943460 – all ok. Add 943460 – behavior returns.

What does "clean install" mean? Is 943460 installed now and all is well?

Bare disk with nothing but Windows. No problem seen here when 943460 is included.
