On Jan 4, 3:25 pm, Umar Reyi <iye...@xxxxxxxxxxxxxxxx> wrote:> I am running Windows XP on a Toshiba Tecra laptop.

Should I consider using <http://www.quickpcsolutions.org/to> evaluate and fix the issue?

After at least an hour of usage, I see the following message when I attempt to "Hibernate".

Windows System Error
Insufficient system resources exist to complete the API

At this stage, "Hibernate" is not an option and I can either "Logoff" or "Shutdown".

Has anyone seen this occur and is there a suggested workaround to resolve this issue?

Thanks in advance.

Personally, I would advise against downloading and running any program that claims to fix computer problems by scanning your system's registry for errors. Unless you are very familiar with the Windows registry, it's possible that you

Re: Windows System Error on a Toshiba Tecra

will allow the program to delete an entry that will cause more problems than you already have.

Here's a possible solution provided by Microsoft that you might want to try first.

I installed the patch identified below to fix the hibernation issue.

Now I see a new issue where a blue screen with a title "BAD MEMORY POOL" confronts me somewhat intermittenly.

Thanks for any pointers to fix this issue.

The computer occasionally does not hibernate and you receive an "Insufficient System Resources Exist to Complete the API" error message in Windows XP with Service Pack 2, in Windows XP Tablet PC Edition 2005, or in Windows XP Media Center Edition 2005 <http://support.microsoft.com/kb/909095>

Here's a link to the file noted in that article.

Update for Windows XP
(KB909095) <http://www.microsoft.com/downloads/details.aspx?familyid=9D20F96A-A8D...>

Good luck
