Hello Gerry and thank you for your response. Here is the information you requested:

Total 504M, Limit 4964M, Peak—since I am not sure how to enable display which aggregates total peak mem usage of all processes, I added the delta from each process and arrived at 680M peak.

Yes, I leave the computer on 24x7. I use ZoneAlarm, Sophos AV/malware including nightly full scans, occasional weekly scans with AVG AntiSpyware, Spybot S&D, Super AntiSpyware and also run Spyware Blaster. My D-Link DIR-655 also has protection.

I run Diskeeper Pro weekly on both volumes for two hours late at night. Fragmentation has not been an issue nor do the symptoms (being so selective) point to that. No memory optimizers because I do not subscribe to the premise.

There are no warnings or errors in either System or Application Evt log following reboot.

Gerry a écrit :

Scott

Try Ctrl+Alt+Delete to select Task Manager and click the Performance Tab. Under Commit Charge what is the Total, the Limit and the Peak?

Do you leave your computer on 24/7?

Open Disk Defragmenter and click on Analyse. Select View Report and click on Save As and Save. Now find VolumeC.txt in your My Documents Folder and post a copy. Do this before running Disk Defragmenter as it is more informative.

Any memory optimisers installed?

Please post copies of all Error and Warning Reports appearing in

Re: XP Performance Issue

the System and Application logs in Event Viewer for the last boot. No Information Reports or Duplicates please. Indicate which also appear in a previous boot.

You can access Event Viewer by selecting Start, Control Panel, Administrative Tools, and Event Viewer.

A tip for posting copies of Error Reports! Run Event Viewer and double click on the error you want to copy. In the window, which appears is a button resembling two pages. Click the button and close Event Viewer. Now start your message (email) and do a paste into the body of the message. Make sure this is the first paste after exiting from Event Viewer.

--

Hope this helps.

Gerry

Scott wrote:

Hello,

My machine is P4 3.6Ghz, 2GB RAM, XPPro SP2, all Win Updates installed, Sophos Antivirus, Also scan weekly and alternately with the following utilities AVG AntiSpyware, S;ybot S&D, Super AntiSpyware, AdAware 2007. Also do weekly updates with SpywareBlaster. I do scheduled defrag every night with Diskeeper. I've struggled with these issues for months. Hope someone can help: Symptoms: 1) Right Clicking on files or folders in Windows Explorer requires about 30 seconds for the context menu to visualize and then 10 seconds more for any chosen action to occur. Sometimes the context menu doesn't visualize at all and the entire Windows Explorer interface does a "whiteout." 2) Highlighting a file or folder and selecting 'Edit' dropdown menu has same symptoms as #1 above. 3) Deleting a file takes 20-30 seconds. 4) Internet Explorer 7 takes painfully long (30 seconds to a minute) to initialize and it takes about 20-30 seconds for new tabs to initialize. By contrast Firefox 3 Beta 2 initializes fast and renders fast. Within Windows Explorer I disable the 'Automatically search for network drives and printers' and in System properties have chosen 'Best performance' option. All other programs on my computer are running without any issues including Windows Media Player 11. Here's what I've done so far without fixing the problems:

Re: XP Performance Issue

- 1) Ran HijackThis and verified everything is clean
- 2) Ran ShellExView and selectively disabled items one-at-a-time and then disabled everything which wasn't native to XP
- 3) Uninstalled IEPro plugin
- 3) Uninstalled/reinstalled IE 7
- 4) Performed a Windows XP Repair
- 5) From time to time historically, the svchost 100% CPU issue has kicked in (not in a long time though). When it does I use this script:

```
et stop WuAuServ
net stop bits
taskkill /f /im wuauctl.exe
sc config WuAuServ type= own start= auto error= normal obj=
LocalSystem
sc config BITS type= own start= auto error= normal obj= LocalSystem
sc config wudfsvc start= disabled
