Andrew Thx for responding. I did see that but I dismissed it as I haven't got Norton AntiVirus I've got Norton Security Internet 2008 – on second thought, I guess it's all the same. I've had it installed for months and never have these errors been produced.

Oh Cripes .. I just did a Registry Search for IRPStackSize, twice exactly as I typed here and nothing came up. I wonder if someone knows a Site that has a Registry file I could merely click on to get the results in the Registry. I've changed real minor things but never have I added anything like suggested.

I guess I'm going to either live with this or read this KB article over a dozen times to know what to do. It scares me to even think about attempting this change.

If I did venture in, which I doubt I would, what size would I put in – the WXP Default size 15? Thx Andrew but me thinks it's too advanced for me.

WXP Pro SP2 all Updates, IE 7.0, Office Pro 2007, Norton Int Sec 2008, Quicken & Quickbooks 2008 versions, My two Raptor HDs have 50% free space (not Raid). CPU is Intel 3.6, 2 GHz Ram, DSL Router, Wireless networked to laptop although seldom used but I did have the Laptop on when these errors were produced.

My Desktop recently returned having had a new Power Supply 650W installed. When returned, besides having my HDs in wrong, a CPU Fan Error on boot and a

RE: IRPSTACKSIZE TOO SMALL ERROR 2011

Dev Mgr HD entry foreign to me for which Windows brought forth drivers on booting the first time, I saw dozens of repeated error 2011.

I researched and when I saw it pertained to a Server, I thought it was their Server whereas mine is a stand alone computer one user and didn't pursue it further. I returned the computer to get these things "fixed" and the HD entry in Device Mgr taken out. All seemed to be running fine.

In Network connections I've disabled their "Local Area Connection 2" using a different device.

These Error 2011 entries didn't reappear when I was using it until this evening when I saw ia length of 10 inches and it's frightening.

Description:

The server's configuration parameter "irpstacksize" is too small for the server to use a local device. Please increase the value of this parameter.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

0020: 00 00 00 00 00 00 00 00

Hope I've given enough information that u can suggest a fix or and/or tell me how serious this is. Why would I be getting this error when I'm not on a Server?

I'm reluctant to return it to that Shop so hopefully it's something a Novice can adjust. Thx for any suggestions. ...
