I need to add settings to the registry repeatedly. I've been doing it via a bat that does a few related things then calls a .reg file (old style, text editable) but then I have to answer the "do you want to do this" and then "this was done" interactive prompts.

I there some way to put a switch on the line to eliminate the interactive prompts or perhaps another simple method of adding the settings to the registry from a .bat ? .

Use the command %windir%\regedit.exe /s <Path\>xyz.reg and note the /s switch.
