I have a Sony RX650 PC running XP with all current maintenance installed. I purchased a new LG W2252TQ 22 monitor. The current driver for the adapter (NVIDIA RIVA TNT2 Model 64 (Sony) will not allow me to set the resolution they say I should use with the new monitor. When I go to down load the latest driver from NVIDIA s web site it says I should be using NVIDIA Windows 2000/XP Display driver. I down load the driver and it creates the following directory C:\NVIDIA\Win2KXP\71.89ver . Then it loads the NVIDIA utility to load the driver. The utility starts and then comes out with the following message (The NVIDIA Setup program could not locate any drivers that are compatible with your current hardware). I also tried this running in safe mode but the same problem occurs. Then the program exits. Ant idea what I m doing wrong?

Thanks,
Rick
