Hello,

During VWWare installation, a pop up message instructed me to disable AutoStart feature on my system, which I obediently 'OK'ing. However after sometime I decided to uninstall VMWare and would like re-enable Auto Start again. How to do it? When I 'google'ed for solution, it seems like everyone wants to disable this feature and some peoples did mention about using Tweak UI, which I do not prefer. Please assist me

.
