Hi

I am running Windows XP, from yesterday onwards I am getting this NOTICE:  
saying " You have not completed the virus scan! If your computer is  
infected, you could suffer data loss, erratic PC behavior, PC freezes and  
crashes.

Do you want to install AntiSpware Suite to scan your PC for malware now?  
(Recommended) OK or Cancel"

Anybody know what is this, is this some kind of spyware or malware  
something? is there a way I can get rid of this?

Thanks  
Ollakal
