I have recently started having issues where opening a file from a program (Outlook, explorer) takes literally about 5 minutes to complete. If I go from within the operating program (XL, Word), it is instantaneous. But from outside, it takes forever.

I think you are confused in your use of terminology... all of those programs are "inside the operating system", such operating system being Windows XP (presumably).

What are you having problems opening?

OK. THIS one I can understand why you are having a hard time understanding, so there may be hope.
