Ink costs can be excessive for Ink Jet printers. Couple that with the almost continuous issue of jets clogging and requiring cleaning. I recommend that users have two printers – A B&W Laser Jet ( Brother is a good choice ) & a separate Color printer. Color Laser Jet printers have come down in price but might still be too costly for a home user. Most recent Brother Laser Jet B&W printers can be ~\$120 and many have built-in Wireless capability.

You jest. A colour laser jet can be had these days for around £120. A set of replacement toner cartridges costs far more than that. Different technology – same scam.
