I'm trying to sync one directory with another. I've got an xcopy command that makes sure that files on the source are present on the target, but I also want to delete files on the target that are not present on the source.

Currently my command looks like this:

```
for /R Z:\test1 %F in (*.*) do if not exist "X:%~pnxF" del "%F"
```

This works fine when I run it on the command prompt directly, but doesn't work in a cmd file. I seem to remember something about having to double up the % but I can't remember the details, I tried this in various places but can't make it work. Any ideas?

Phil Hibbs.

Hi Phil,

you should take a look at robocopy from Windows 2003 Reskit. There is a switch /MIR (Mirror).
