I got a new motherboard today with a new p4 in it. I had xp pro installed from before. it boots up perfectly and gets to the login screen. my usb wireless keyboard doesnt work at all (microsoft wireless) and my PS2 keyboard **ALSO DOES NOT RESPOND**. i used the ps2 keyboard to config the bios and it worked there. windows boots up in safe mode and or regular and no matter what i cannot type 1 key. hitting numlock also does nothing

WHAT IS GOING ON!!!
