No, I haven't changed a thing. It started doing this a couple of weeks ago and is getting worse. When using a process such as word without being online, my monitor started getting these strange lines running across it. It is only today that I was able to correlate the two together. When a line would go across, the cpu of the ups would shoot up to like 68% and then drop to 0. Then another line and the ups went up again. Yet it doesn't happen when connected.
