I've installed SBC DSL with Yahoo. The back & forward side buttons on my Wireless Explorer Mouse 2.0 have stopped working in Yahoo or is DSL the culprit?. (Works in the GBR ISP with dialup. Battery strength is good.) The scroll wheel still works in Yahoo. The side to side function works (but is still a useless feature for me). Is there a fix for for the side buttons not working? (The wireless MS keyboard works as always, too.)

Since I am here with the Yahoo/SBC DSL problem, anyone know why my APC biometric fingerprint reader also will not function with signing into Yahoo/SBC DSL? It does not even recognize that a password is present. Again, it works under dialup GBR. Once I get INTO Yahoo it seems to work. (Previously I had only one past instance when it would not work over a year or so.)

.
