Just about to embark on a new project to build my own PC. I have identified the following items that I might need to have a first working model:

- 1) CASE
- 2) Processor
- 3) Heatsink & Fan
- 4) Memory module
- 5) Motherboard
- 6) Hard disk
- 7) CD/DVD
- 8) Floppy drive
- 9) USB card
- 10) Sound card

Is there anything else I need to put on this list? The idea is to build and upgrade it as and when new brain waves reach me. Alternatively, are there any sites where there is a checklist for a modest PC?

Regards,
