Epson Tech Support finally got back to me with the below response. I did check my reg file and the Registry Key for scanners is NOT in my registry. Since the scanner is the only hardware that didn't install, this Registry Key MAY be the answer; however, I have no idea where to find a replacement key. None of my backups are old enough to predate the problem. If I find it, how do I get it into my registry to see if that solves the issue??

C

---

Thank you for contacting the Epson Connection.

'An error occurred during the installation of the device. The required section was not found in the INF'

This error can happen during the installation of any hardware type. Completely removing and reinstalling the drivers or using the latest drivers does not correct the issue.

This error is a result of a missing Registry Key located in the following directory:

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\Class The keys stored in this directory are used in conjunction all of the different hardware categories found that can possibly installed on a computer ranging from printers to scanners to CD-ROM drives, etc. These Registry Keys are System Keys and do not get added or deleted through the installation of any of our drivers. Instead our drivers require that keys be present in order to fully complete the installation and configuration the product on the system. These usually get deleted by accident as result of someone purposely going into the Registry in an attempt to troubleshoot their system.

For scanners the following Registry Key is missing:

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\Class\{6BDD1FC6-810F-11D0-BEC7-08002BE}

For printers the following Registry Key is likely missing:

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\Class\{4D36E979-E325-11CE-BFC1-08002BE}

Re: Unable to install scanner

Other Registry Keys in the same directory can also be missing, resulting in the same error message. Regardless, this is a system issue. Please contact your computer vendor or Microsoft to get the missing Registry Key restored. The issue can most likely be resolved by copying the affected key from another computer and then merging it in the Registry of the affected computer
