I just know what I have read. I'm fairly sure the drive needs to be set as a slave with a jumper, you'll need to check the label on the drive and see the maker's web site for the details. Windows XP disk management should allow you to format the drive once the disk shows. Yes, if the cable you have supports auto termination, you don't need to do it again.

|
| My host adapter supports automatic termination. I can see that in its BIOS.
| So, I suppose I do not have to cap the SCSI cable

separately. I however am
| new to SCSI apart from driving an external Iomega
removable HD, so, if I am
| thinking wrong, please let me know. Thanks for your
feedback.

|
| Teilhard.
