Hi,

On a similar note, my Windows doesnt detect the video card that is installed inside.

As a result it has installed a "Standard VGA Graphics Adapter". Can someone please tell me a way to figure out the make/manufacturer of the card so that I can download the driver for this card from internet and install them?

A similar problem happens on another Windows 2003 server machine that I have.

I donot have a list of all the components that these machines are made up of hence I can't simply look that list and figure the card name.

Also since these are not my own machines, I am not permitted to open them up. BTW, if it might help the machines are DELL machines.

Thanks,

Sug
