I did disable the sound in the manager as was suggested.

But I still can not disable it in the BIOS. Boot process will not pass the POST.

I have latest BIOS update. Any other suggestions?

As for the board. This is the first Intel MOBO I am installing and probably the last one. I never had problems with ASUS boards. Support from ASUS is also better.

I'd suggest first disabling the sound card in the Device Manager of Windows XP. Do not uninstall it, as it will attempt to reinstall during the next boot.

Then, disable it in the BIOS. This should prevent the problems that you're having (and should allow you to install the new sound card without any problems also).

I have an Intel D945Psn MOBO with on board sound. Microphone did not work, so I have decided to get PCI sound card. I am having problems disabling on board sound. If I use BIOS setting to disable sound, Window XP SR2 will hang after post. Sound card is working fine and I have my microphone back, but message about found hardware is popping out every boot.
Any one had same issues with the Intel card?
