Really Lost ! Could you possibly go a little bit more in depth on how you did this. I would really appreciate it  
Thanks  
"Dave" wrote:

Still a little lost with what you did there. I'll try and see if I can get it to work.  
Thanks again  
"Charles..." wrote:

It definately works.....

I am over the moon....

All my brainstrain is over....

I didn't use msdos, i used windows & my mouse... (no typing, :D) just copied the 3 files over to a new folder on desktop... renamed & removed that line in the text tile with note... then carried on with installing the LOST Plug and Play Software Enumerator....

To get to C:\windows\inf just type it in your browser as windows hides the INF folder....

"Dave" <[Dave@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:Dave@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx)> wrote in message <news:3DCE1D8B-68CF-45FF-AE78-DD05237382D4@xxxxxxxxxxxxxxxxxxxx>

Let me know if this works. I'm a MSDOS dummy so I don't want to try if it dosen't work. Would reinstalling XP fix the problem? May be simpler to just install a sound card.

Re: no sound

Thanks  
Dave

"Charles..." wrote:

I found the following  
solution, whether it cures it  
is anyones  
guess..... I  
will try it later....

"These are instructions on  
how to install the Plug and  
Play Software  
Enumerator in XP/2k -- if  
it is missing. If it isn't  
missing and works  
then  
this wouldn't be the cause of  
your audio problem.

I presume swenum.inf is a  
Win9X/ME only file. The  
machine.inf solution  
should work for 2000 and  
XP. If you can't find or see  
the files it may  
be  
because your explorer isn't  
configured to show system  
or hidden  
files --  
check your options or use a  
cmd prompt.

From an MSDOS cmd  
prompt type or cut and  
paste:  
md \temp  
cd \temp  
copy  
%windir%\inf\machine.inf

Re: no sound

Re: no sound

```
\temp\allmachine.inf  
copy  
%windir%\system32\drivers\swenum.sys  
\temp  
copy  
%windir%\system32\streamci.dll  
\temp  
notepad  
\temp\allmachine.inf
```

Using notepad go to line 20  
(CTRL-G 20) which should  
be  
ExcludeFromSelect=\*  
Delete and remove that line  
and save the file. Notepad  
and the cmd  
prompt  
can be closed.

%windir% was probably  
c:\windows\ and that was  
automatically be  
expanded in  
the windows cmd prompt.

Now, just go to Add  
Hardware, add a new  
hardware device there at the  
bottom,  
install from list, next, have  
disk, and select the temp  
directory where  
we  
copied the files (c:\temp\ in  
the example here).

You should have all the  
different machine level  
services listed since  
we've  
removed the  
ExcludeFromSelect=\*  
which hid them all. We only  
want to add  
Plug  
and Play Software  
Enumerator and nothing else  
so select and install  
only  
that."

I have  
exactly the  
same  
problem....  
identical... I  
have tried  
asking  
on  
here times  
over the last  
few weeks.  
but nobody  
seems to  
have a clue  
how to  
rectify the  
prob...

I have tried  
installing  
many  
versions of  
the driver....  
installed/uninstalled.  
still no  
change....  
done it all...  
got  
extremely  
bored trying  
different  
ideas....  
even  
showing the  
hidden  
non-running  
devices just  
in case...

I think its  
got

something  
to do with  
one of  
windows  
updates....  
Δ  
couple  
of months  
back, I let  
MS update  
install the  
AC97  
driver  
update....  
my  
sound  
disappeared.  
I rolled  
back the  
driver, all  
came back  
and had  
been  
fine since,  
until a few  
weeks back,  
my sound  
simply  
disappeared,  
the  
driver  
wouldn't  
start.... even  
my original  
driver  
installs fine  
but  
refuses to  
start. Xp  
states to  
device is  
fine....

I have  
completely  
run out of  
ideas....  
How on  
earth can  
the device  
be

Re: no sound

Re: no sound

fine, the  
driver be  
enabled, but  
it wont  
start....

I might pick  
out a spare  
drive &  
install a  
fresh copy  
of XP & the  
sound  
driver on it  
just to  
prove a  
point....
