Hi,

Yes, you read that correctly. This is about a 5.25" floppy drive – namely getting one to work. (I know! I know! Don't say it!!)

I need to add a 5.25" drive to my Win XP Pro system. I have installed the drive and new cable to handle both this and the 3.5" drive but without success. The BIOS does provide an option for a 5.25" floppy. The 3.5" works fine, but when I try to add the 5.25" (any configuration on the cable), neither drive works.

Any ideas?

Thanks,  
Olen
