hello,

I bought a new usb mouse for my laptop, but it happens something very strange when I plug it:

on my laptop I have 4 usb ports but the mouse will work only when plugged on two of them. (the ones on the left side, I am right handed so it's really uncomfortable)

when I plug the mouse on the other two ports windows tries to load a driver, but it says it cannot find it... and mouse stays unusable.

I have win xp media center edition + service packs

I tried the mouse on another laptop equal to mine (same model and OS) and I got the same problem.

I now know that the problem is not of my computer in particular, caused by some hardware failure or software misconfiguration.

does anyone know how to solve it?

thanx alot  
Giulio
