Are you using the native resolution for your flat screen?
You obtained drivers from device manu, or mobo if on board?
Is there anything shown in Event Viewer?

No it was doing it before the new drivers. I had not had this problem
before
till about a month ago. I had only updated the directx 9c to the Apr.
version. The next morning it was fine, then that afternoon when I booted
up
it started. I've rolled back prior to the directx 9c install, loaded beta
drivers went back to the 93.71. It would be fine for a few days then
start
again. I'm just wondering what windows xp looks at at bootup to tell it
what
the resolution is. I don't use any resolution but 1440x900 32bit 75hz.
Before my flat screen I used 1280x1024 32bit 75hz.

94.24 drivers?
thats very descriptive

If it was ok before why did you update?

Well, I loaded the 94.24 drivers last week when they came out. My

resolution

worked fine till this morning. So I went about 5 days with no problem.

I

don't know what is causing this, I run at 1440x900 32bit 75hrz. It

started

at

800x600 16bit 60hrz. Is there a file I can look at that windows uses

during

bootup? When xp gets to the welcome screen I can tell if it's the

wrong

res

or not.
