I am a trainer who needs to show/train in both Office 2003 and Office 2007 on an XP platform but not at the same time. I have already loaded Office 2003 on the XP platform.

I have some clients who are on 2003 and others who are making the switch to 2007.

I have heard conflicting stories on this so I thought I would come to the experts.

What do I need to know to install this 2007 successfully so it doesn't screw up my system. I need both on my computer.

Thanks a lot

I've got both versions on my computer. I believe the only restriction is that you can only install one version of Outlook, not both.
