We did some more digging.

All the settings in Outlook Express and Internet Explorer look correct except:

In Internet Explorer Tools / Internet Options / Connections / LAN Settings

he has 'automatically detect settings' check marked.

Unchecking, closing I.E. and restarting E-mail did not help.

We also clear the Outbox between tests.

Some other strange (I thought anyway) items in the IpConfig /all:

The connection-specific DNS suffix is blank

The DNS server is 192.168.1.1

He checked that the XP PRO Internet Firewall is off.

He had (and deinstalled) McAfee Firewall and Kazaa Lite.

TIA!
