Hi Lynne,

They would have different DNS (Domain Name Servers). So the problem happens in all your connections involving different Internet Service Providers?

It just struck me that it was the same problem I was having, where you have to click repeatedly (up to seven times) for a webpage to appear, where you connect successfully to a web page and a half hour later you fail. You also download a page without pictures and have to click refresh for the pictures to download.

I was suffering from all these and it was solved changing my DNS, which was on automatic, to the numbers provided by my ISP.

Good luck
