First, a great hello to every experts. My computer is getting slower n slower by day and i am quite certain that the root of such problems are accounted by the Printer and Internet problem.

1. When i start my Xp computer, an internet connection will start and ask me if i would want to connect to internet (modem). I didn't have this pop up connection window when i just bought the computer it just happen recently when i removed a program.
2. Also, when i start my computer, a window will come out asking saying something like "Computer is configuring the Hp psc 1210 printer" This process usually takes abt 1-3 minutes an it is getting on my nerves. this window also come up when i on or off the printer.
3. I believe you people out there are kind and helpful and will be able to help me in no time.

Thank You.

Regards,
YanZi.
