Mark,

Open Internet Explorer > Tools > Options > Programs > "Reset Web Settings"

If that does not help, try this fix:

http://www.mvps.org/sramesh2k/reg/IE_Default_Browser.reg

Edit the file to match the drive letter where Windows is installed (default set to C:\)

For some reason, when I click on a hyperlink inside a certain program, Internet Explorer does not

<http://microsoft.com>

The specified path does not exist.

Check the path, and then try again.

I am using Windows XP Home (SP2)

This problem seem to have happened after I uninstalled "MyIE2"

Thanks,

Mark S.
