| Have a new Windows 2000 Server network. Server configure
| with duplexed drives. Latest Service Pack applied. Legal
| firm with 5 new Win XP Home Edition workstations. All
| machines with XP Service Pack 1 applied. One machine (the
| principal attorney's, of course) continually gives error
| message "Delayed Write Failed" when attempting to save or
| move files to the new server. Error message is accompanied
| with total data lose if new file being saved. Have ensured
| 80 wire, 40 pin cables in use. Have disabled Enable Write
| Caching On The Disc for hard drive. Have disabled force
| faster UDMA modes in BIOS. Have reinstalled the
| workstation OS and reapplied SP1. All of above has failed
| to resolve the "Delayed Write Failed" issue. This one XP
| machine appears to be configured exactly like the other
| four XP machines, however, it is the only machine with an
| issue. All other machines save to server without any
| problems.

| Can any one PLEASE shed light on this problem or direct me
| to additional information on the subject? This ia a known
| Microsoft issue that was supposedly rectified in SP1.
| Besides appearing foolish to my client, I am at a real
| loss as to how to proceed? HELP!!!!

| Gratefully,
| scc
