Ever since I installed SP2, games do not load at pogo.com. The "Loading Game. Please wait..." window appears, and just sits there forever.

I have disabled the popup blocker, and I have enabled cookies. I do not use Windows Firewall, I have a 3rd party firewall (Kerio). It's the same configuration I had before SP2. I even tried uninstalling the Google toolbar (where I had also tried disabling its popup blocker). Still no go.

Time to switch to Opera?
