Hi I was wondering if anyone could help me with this question I have regarding Spybot 1.3. When I run spybot a highlighted in red a problem listed as: I have read the reviews from 8/27/04 under XP new user spywarequestion. I have just purchased a new lapop about a month ago and I just installed service pack 2 on it last week and I am still getting this DSO error when I run spybot and I have read the review and I tried to go back and download for the patch for internet explorer 6.0 but it is saying that you need to download version 6.0 but I already have it loaded on this laptop. I am hoping that since I have downloaded service pack 2 that it should be okay and that I can exlude this item from future searches. Can someone help me out here? Thank you very much

"DSO Exploit" - 5 entries

Expanding the item, it lists 5 registry entries DSO Exploit: Data source object exploit (Registry change, nothing done)

HKEY_USERS\S-XXXXXX\Software\Microsoft\Windows\CurrentVersion\Internet Settings\Zones\0\1004!=W=3

DSO Exploit: Data source object exploit (Registry change, nothing done)

HKEY_USERS\XXXXXXXXXXXXXXXXXX\Software\Microsoft\Windows\CurrentVersion\Internet Settings\Zones\0\1004!=W=3

DSO Exploit: Data source object exploit (Registry change, nothing done)

HKEY_USERS\S-xxxxx\Software\Microsoft\Windows\CurrentVersion\Internet Settings\Zones\0\1004!=W=3

DSO Exploit: Data source object exploit (Registry change, nothing done)

HKEY_USERS\S-XXXXXX\Software\Microsoft\Windows\CurrentVersion\Internet Settings\Zones\0\1004!=W=3

DSO Exploit: Data source object exploit (Registry change, nothing done)

HKEY_USERS\DEFAULT\Software\Microsoft\Windows\CurrentVersion\Internet Settings\Zones\0\1004!=W=3

The series of X's in the keys above I put in to replace the numbers that are really there. Should these be deleted or left alone? I certainly would appreciate your help and advice.
and the error that keeps logging on my system when ran.
