No matter what I do windows does not recognize the .cda format. The file format is checked in WMP, but WMP gives me this error code.

C00D1197: Cannot play the file

Windows Media Player cannot play the file. You might encounter this error message for one of the following reasons:

Your computer is not connected to the local area network (LAN) or to the Internet. Connect to the network or Internet, and then try again.

The path to the file is not valid. If you typed a Uniform Resource Locator (URL) in the Open URL dialog box, verify that the file name is spelled correctly and that the path to the file is correct, and then try again. If you clicked a link on a Web page, the link might not be valid.

The server is not available (for example, the server is busy or not online). Try again later.

Some network protocols in the Player are not enabled. Enable all network protocols, and then try again.

The proxy server settings for the Player are not configured properly. Verify that your proxy settings are correct, and then try again.

To enable all network protocols

On the Tools menu, click Options, and then click the Network tab.

In the Streaming protocols area, select all the protocol check boxes.

To verify your proxy server settings

On the Tools menu, click Options, and then click the Network tab.

Verify your settings in the Streaming proxy settings area.

Note

If you do not know what your proxy server settings should be, on the Network tab, select a protocol, click Configure, and then select Autodetect proxy settings or Use proxy settings of the Web browser (available for HTTP protocol only).

Error ID = 0xC00D1197, Condition ID = 0x00000000

Web Help

The problem with this is I am trying to play the music from my own cr rom drive on my own system.
