### XP REPAIR

.....

Boot from the CD or you can insert the CD while at the windows desktop but when the setup screen appears, exit setup and reboot. If your system is set to be able to boot from the CD, it should detect the disk and give a brief message, during the boot up, if you wish to boot from the CD press any key.

Once you have pressed a key, setup should begin. You will see a reference asking if you need to load special drivers and another notice that if you wish to begin the ASR (Automatic Recovery Console) depress F2. Just let setup run past all of that. It will continue to load files and drivers.

Then it will bring you to a screen. Eventually, you will come to a screen with the option to (1) setup Windows or (2) Repair Windows Installation using the Recovery console.

The first option, to setup Windows is the one you want and requires you to press enter. When asked, press F8 to accept the end user agreement. Setup will then search for previous versions of Windows. Upon finding your version, it will ask if you wish to Repair your current installation or install fresh. Press R, that will run a repair installation. From there on, follow the screens.
