Had troubles off the bat when the upgrade wouldn't continue – message said the files on the computer were newer than the CD. Discovered it was because I had SP2 on it. Uninstalled SP2 and was able to start the upgrade. Problem came during the first reboot when I got the BSOD and this STOP error:

Stop 0x00000024 or NTFS\_FILE\_SYSTEM

I've rebooted many times, run CHKDSK /F /R, used the restoration disk for Home Edition – always the same result. Seems I may have a problems with the NTFS.sys system file.

Is there anything short of a complete disk wipe and reinstallation that I can do to fix this?

TIA,
