Every time I log off Windows Xp Home Edition a warning event is logged in the Event Viewer. The Event Viewer can be found on the Administrative Tools Menu on the Start Menu.

The error message reads as follows:

Source: Userenv

Category: None

Type: Warning

Event ID: 1517

User: NT AUTHORITY\SYSTEM

Description:

Windows saved user "Computer Name"\user registry while an application or service was still using the registry during log off. The memory used by the user's registry has not been freed. The registry will be unloaded when it is no longer in use.

This is often caused by services running as a user account, try configuring the services to run in either the LocalService or NetworkService account.

How do I find out what service(s) are running as a user account?

And how do I configure the service(s) to run in a LocalService or NetworkService account?

And which account is best to change the service to? A LocalService account or a NetworkService account?

Please help me with this problem.

THANK YOU,
Techno Phobe.
