Thanks to those of you who replied to my earlier messages ("Keyboard trouble and uncontrollable cursor" and "Help! (please read)") ...

At the moment, there seem to be two possible courses of action:

- (1) switch off the *microphone function*; or
- (2) update my *keyboard driver*.

Re: (1), I can't seem to find the place to do that. As I mentioned in another post, I've located the place to adjust the settings, but I can't see to find anywhere where I can turn it off.

Re: (2), I have a feeling that a new driver may be the key. The keyboard is no longer registering any input. But I'm just not sure where to get a new driver.

Any help on either of these would be much appreciated!

Thanks.
