mike,

Repair/Reset Winsock settings

<http://windowsxp.mvps.org/winsock.htm>

If you have SP2, scroll down to >>

Windows XP Service Pack 2 – New Winsock NETSH commands (try this first)

[If you have suddenly lost your Internet connection after removing spy-ware (such as NewDotNet, and Commonname) the following steps will help restore your connection. This works for Windows 9x/NT/2000/XP.

1.) Download WinsockFix.zip. (by: Option^Explicit)
<http://www.tacktech.com/pub/winsockfix/WinsockFix.zip>

2.) UnZip WinsockFix.zip (Pay close attention to where the file is extracted to.)

3.) Run WinsockFix.exe.

4.) Click the Fix button.

This program will clean up your TCP/IP connection and rebuild the database. After the program is complete, reboot and your problems should be resolved.

WinSock Fix

Winsock and TCP Repair Utility

This Utility Restores Registry Keys, that may become corrupt after Removing the Host Program that Modified them.]

The Winsockfix Utility will:

- 1.) Detect your current Operating System
- 2.) Release the IP address, taking you "Offline"
- 3.) Reset the TCP stack using Netsh.exe (Windows XP only)
- 4.) Delete the current Registry TCP and Winsock Values
- 5.) Import new "Working" Registry Values
- 6.) Backup any Current "Hosts" file

Re: shared properties is undefined

- 7.) Replace the "Hosts" file with a default one
- 8.) Reboot the Computer

WinsockFix.zip direct download
