| I have a P4 system with Win XP (home Ed). I use a 2 way satellite for
| Internet access and I have his and her computers networked using
| network cards and Wingate software. So far I have not chosen to click
| on the little popup window that appears on my desktop and says updates
| are available. I have had this system for about 14 months. I would
| really appreciate some knowledgeable inputs on the pros and cons of
| downloading these updates. I have pretty good firewall protection with
| the Earthlink satellite system and I use Norton (a new one)
| regularly. The satellite systems modems, (one transmit and one
| receive) seem to be very sensitive to changes, Comments please??
|
| .
