|| I have McAfee set to run automatic updates. However, when I sign on  
as

|| "user", I get a popup saying that I must log on as Administrator for  
the

|| definition updates to install. Since it is a communal computer, the  
|| administrator only logs on every week or so, leaving the computer  
exposed to

|| viruses. How can I allow the updates to install without logging on  
as

|| administrator?

|| A related issue is:

|| After installing a financial program on the computer, it will only  
run under

|| an administrator log in. How do I allow programs to run under a  
"user" log in?

|| Rockchips

|

| You can't it's a limitation of that software.

|

| Any questions, please ask in the McAfee Forums...
