What happens when you type the following exactly in the Run dialog box on the Start Menu?

regedit.exe

Any errors? If so, what is the exact error message.

when i go to start run regedit a sign comes out and reads
16 bit MS-DOS Subsystem
C:\WINDOWS\system32\regedit.com
The NTVDM CPU has encountered an illegal instruction.

Regedit.com is NOT a valid Windows XP file, it is probably a virus.

Follow David Lipman's advice from another post of his:

Download MULTI_AV.EXE from the URL --
http://www.ik-cs.com/programs/virtools/Multi_AV.exe

To use this utility, perform the following...

Re: Need help with my regedit !!!!!!!!!!!

Re: Need help with my regedit !!!!!!!!!!!

```
Execute; Multi_AV.exe { Note: You must use the default folder C:\AV-CLS  
}  
Choose; Unzip  
Choose; Close
```

```
Execute; C:\AV-CLS\StartMenu.BAT  
{ or Double-click on 'Start Menu' in C:\AV-CLS }
```

NOTE: You may have to disable your software FireWall or allow WGET.EXE to go through your FireWall to allow it to download the needed AV vendor related files.

C:\AV-CLS\StartMenu.BAT --- { or Double-click on 'Start Menu' in C:\AV-CLS }
This will bring up the initial menu of choices and should be executed in Normal Mode.
This way all the components can be downloaded from each AV vendor's web site.
The choices are; Sophos, Trend, McAfee, Kaspersky, Exit this menu and Reboot the PC.

You can choose to go to each menu item and just download the needed files or you can download the files and perform a scan in Normal Mode. Once you have downloaded the files needed for each scanner you want to use, you should reboot the PC into Safe Mode [F8 key during boot] and re-run the menu again and choose which scanner you want to run in Safe Mode. It is suggested to run the scanners in both Safe Mode and Normal Mode.

When the menu is displayed hitting 'H' or 'h' will bring up a more comprehensive PDF help file. <http://www.ik-cs.com/multi-av.htm>

* * * Please report back your results * * *
