And how exactly do you back up the Registry?
In order to restore a damaged Registry,
you'll have to successfully boot-up your system.
But you can't successfully boot-up your system
if your Registry is damaged, can you?
Isn't that somewhat of a Catch-22?

Get ERUNT. Restoration of registry can be performed from the Safe Mode command prompt, so you don't need XP running. No Catch 22 here. :)
