-

Let's try unregistering and then registering printui.dll.

Start | Run | Paste the following line in the box:

```
regsvr32 /u printui.dll
```

Hit your Enter key.

You should see a message telling if it unregistered or not.

Start | Run | Paste this in the box:

```
regsvr32 printui.dll
```

You should see a message telling if it registered or not.

If you didn't get any error messages, try your Hp Photo printing deal again.

If you did get any error messages trying to unregister and register printui.dll, try this.

Sfc.exe, System File Checker repairs/replaces screwed up system files.

Load your XP CD in your CD drive.

Start | Run | Type or paste: sfc /scannow | Click OK

If you have XP Home and it asks for your XP Pro CD, see this KB article...

You may be prompted to insert a Windows XP Professional CD when you run the System File Checker tool in Windows XP Home Edition

<http://support.microsoft.com/default.aspx?scid=kb:en-us:897128>

Re: WINDOWS EXPLORER

In news:33C24551-C020-4365-B414-8F726DEF4039@xxxxxxxxxxxxxx,
oldlady <oldlady@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx> hunted and pecked:

I still get the error and when tried using command line Hp Photo printing came up with an error:Cannot open file..C:\windows\system32\printui.dll.....Unsupported file type or folder. So, I can't even delete the printer and try to start over.. have had printer since I got computer. Is this the problem in control panel...can I fix?? --

"Wesley Vogel" wrote:

Hi,

This line, "0 KB in bad sectors", that was in the log, means that your drive is okie dokie. Your log looked fine and you do not have to do anything, chkdsk already did it.

If you want to read about things like indexes and security descriptors and stuff like that go here.

Understanding what CHKDSK does

<http://support.microsoft.com/kb/314835/en-us#XSLTH3154121123120121120120>

Or you can just keep having fun and not read that at all, it isn't anything that you have to know.

As far as your original post, printui.dll provides functionality to install a printer via the command line.

Are you still getting windows explorer closing with an error when you access printers from control panel?

--

Hope this helps. Let us know.

Re: WINDOWS EXPLORER

Can you post yours, so that we can look at it?

Here's how to copy it so you can paste it into a message.

Open the Event Viewer...
Start | Run | Type: eventvwr | Click OK |
Look in Application | Listed as Information |
Look for Event ID: 1001 and Source:
Winlogon |
Double click that event | Another window
will open |
Click the button below the second arrow (it
looks like two pages).

Clicking the two pages looking button
copies the details of the event
to the Clipboard.

Then paste what you just copied to the
clipboard into a message and
post back here.
