Hi Wes, I was just checking to see if you had commented on my Reply and I don't see my Reply. I wonder what I did or what happened to it. It was so lengthy too and now I don't recall all I told u. Nevertheless, I did enact all these great suggestions and I do think it knocked off maybe 10 secs max from the delayed shutdown but it still takes 1-1/2 mins to complete. Meaning Wes, ya gotta keep thinking! Please!!
Under Event Viewer\Application I don't see any Warnings nor Errors. Something strange today though, I got 300 yes 300 entries for HHCTRL All Event 1904 User N/A.

Also there's a regular pattern of the FIRST 4 entries being UPHClean having to perform in leiu of the actual program closing itself. I'll copy them as they appear, first to last.

Event Type: Information
Event Source: UPHClean
Event Category: None
Event ID: 1412
Date: 7/8/2006
Time: 5:31:05 PM
User: SHARK\Owner
Computer: SHARK
Description:
Setup for handle remapping for process explorer.exe (644) failed. Reverting to closing handle.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.
