Hi CEOwin,

Your Hard Drive is failing. Replace the Hard Drive by adding a new Hard Drive, then copy the files from the old Hard Drive onto the new Hard Drive and then remove the old Hard Drive from the system.

Because the Hard Drive is failing, don't copy the operating system, but install a fresh copy of Windows XP onto the new Hard Drive. Make sure that you partition the new Hard Drive into two or more partitions, before installing the new copy of the operating system.

Copy the data files from the old Hard Drive into the other partitions, then if you want, move them into the operating system's partition.

Hi guys, in my Event Viewer under System, I get this message about error in the disk. At first it started a few times, then lately it seems to be repeated. Like seven of them vertically aligned.... Here's a copy of it.

Event Type: Error
Event Source: Disk
Event Category: None
Event ID: 11
Date: 8/26/2006
Time: 2:03:24 PM
User: N/A
Computer: PERSONAL
Description:
The driver detected a controller error on \Device\Harddisk0\D.

Re: Error message on System

For more information, see Help and Support Center at

And also, about every week, I get this message when I turn on my computer saying a Disk Read Error occurred. Press Ctrl+Alt+Del to restart. Then when I do that, I boot to Windows successfully. Please help and thanks in advance.

PS: For some reason the continuous line up of the errors occur on times while I'm using it..... But nothing seems to happen...
