Thanks my friend – that fixed the problem however now that I can access System Restore I get a message after trying to go back to any restore date that says after closing down and restarting
"Restoration Incomplete
Your computer cannot be restored to (date selected).
No changes have been made to your computer"
Any thought on this problem?
Brian

Brian,

See if this helps.

"Application Has Failed to Start Because Framedyn.dll Was Not Found" Error Message When You Open the System Properties Dialog Box:

I am unable to use "System Restore". I get an error message "rstrui.exe – Unable to locate component. This application has failed to start because framedyn.dll was not found. Re-installing the application may fix this problem". (I also get this message when trying to run some other applications.)
I thought one of my virus software packages might have removed the file but
can not find it in quarantine.

Re: Unable to locate component error message – rstrui.exe

My WinXP came loaded in the PC – is there any way to re-install the missing file?

Thanks

Brian
