My sony Vaio V505 laptop recently got start up error.
After start up, it gives blue screen with stop error
stop 0x0000007F(0x00000008, 0x80042000,0x00000000,0x00000000).

After shut down computer, start again will show the safe mode screen.

I looked up on the web, looks like need to a diagnostic test. I try to
use MS Online Crash Test. <http://oca.microsoft.com/en/windiag.asp>
I downloaded file and made a bootable CD.

But after booting, it didn't show the interface that suppose to come up

according to MS online crash analysis website. Instead it leads to
DR-DOS

Below is what showed:

"Search for USB HDD devices...

USB support successfully initialized

No FAT32 volumes found, existing...

NTFS File system driver for DR-DOS. version 1.200

...

Completed codepage prepare function

Completed codepage select function

NLSFUNC is already loaded."

Anyone had similar experience? Any advice is appreciated!
