Bob,

Everytime I try to delete it, I get the message: SDHelper.dll access is denied, Cannot delete.

SDHelper.dll is probably loaded and in use, that's why you cannot delete it.

SDHelper.dll is the Bad download blocker. Blocks URLs that could install spyware, malware etc.

You must have actived the Resident "SDHelper" (Internet Explorer bad download blocker), which is part of Spybot S&D.

Try starting in Safe Mode and then try to delete SDHelper.dll. SDHelper.dll may not load in Safe Mode, I honestly do not know if it does or not. I have Spybot S&D, but I do not have that option selected.

C:\Program Files\Spybot – Search & Destroy\SDHelper.dll

You may have to reinstall and the uninstall Spybot S&D if that doesn't work.

To start the computer in safe mode

The only thing I knew to do was a System Restore. I did that to a point just before I removed Spybot Search & Destroy. That fixed my .Ink file

Re: .lnk Disabled

problem, so I know for sure that SS-D was the problem, but now I have Spybot Search & Destroy back in my Program files. Everytime I try to delete it, I get the message: SDHelper.dll access is denied, Cannot delete. Looks like it's something I'll have to live with.

Wes, in addition to the first message, behind it was: File: Microsoft Office.lnk disabled. I reinstalled MSO and ask it to repair shortcuts, but that didn't help.

This didn't happen until I removed Spybot-Search & Destroy from my computer. It did this once before for the same reason, and someone gave me a file that would fix the problem, but that was a couple of years ago.

It's really annoying for the message to pop up every time I boot up.
thanks for any help

Normally .lnk files adjust shortcuts to files or folders.

should have read:

Normally .lnk files are just shortcuts to files or folders.

Did you mean Windows Desktop
Search.lnk.disabled ??

Normally .lnk files adjust shortcuts to files or folders.

Windows Desktop Search.lnk.disabled is
some sort of malware. You have

Re: .Ink Disabled

some crap that you do not want.

UPDATE your antivirus software and run a full system scan.

UPDATE whatever anti-spyware applications that you have and run a full system scan with each one.

You might want to start in Safe Mode to run your antivirus and anti-spyware software.

Running a full system antivirus scan or anti-spyware scan in Safe Mode can be a good idea. Some viruses and other malware like to conceal themselves in areas Windows protects while using them. Safe mode will prevent those applications access and therefore unprotect the viruses or other malware allowing for easier removal.

How to start Windows in Safe Mode
Windows XP

Re: .lnk Disabled

I removed/uninstalled a
program from my computer.
Now when I start up
I
get the message: File
Windows Desktop
Search.lnk disabled. Where
do
I
find this file to do a repair or
replace this .lnk file?
thanks
