To Enable the Language Bar on the Regional Settings try this:

And why do I want to enable something that I have no desire to use? If I have found a(nother) bug in MS's XP Pro, then I am about ready to leave it at that.

I may have to just settle for 25 .bin files being (re)deposited in a temp directory every time they get deleted.

I presume you have a GPO been set, did you ty to changes this on the user

I don't know what "GPO" means.

This is a standalone computer with 5 user accounts, no groups, no profiles.

configuration Templates, by typing in the Run command :

gpedit.msc click [OK]

On the Group Policy click under Administrative Templates:

[&] Administrative Templates

[-] Control Panel

[-] Regional and Languages Settings see in the right Pane/Window

what been set for the users or the group of users.

I found a "Regional and Language Options" choice under User Configuration > Administrative Templates > Control Panel. "Group Policy" (which was under User Configuration > Administrative Templates > System) had no such option. Did I pick the correct one?

For the one I found, "Restrict selection of Windows menus and dialog language" state is "Not Configured". The Explain tab contained:

"This setting restricts users to the specified language by disabling the menus and dialog box controls in the Regional and Language Options Control Panel. If the specified language is not installed on the target computer, the language selection defaults to English."

Also have a look under:
[&] Local computer policy
[-] Computer Configuration
[-] Windows Settings
[-] Security Settings
[-] Local Policy.

I have no idea what I am looking for.

<http://support.microsoft.com/kb/883262>

The document is titled: "The new language locales that are supported by Windows XP Service Pack 2 and Windows XP Tablet PC Edition 2005"

I really do NOT see why I should be trying this when the goal was to simply get rid of the files that shouldn't belong there. I think I might just have to throw in the towel on this one and live with it.

My only other thought is to re-install winXP Pro to a different disk on the same computer, and then try to figure out at what point during the re-installing of programs, the 25 .bin files start getting placed into the temp folder. But I am really using way more time than I should be for the issue, which definitely has no easy solution.
