Also, make sure that the contrast is turned up to normal/all the way—whatever you like. It's easy, but sometimes that is the problem :)
Otherwise, a repair will have to be done as suggested.

good luck.

When i turn on my laptop the monitor doesnt light up. The computer turns on fine but just doesnt light up. I can even see everything on the screen at the right angle but it is to hard to see so i cant use it. I need some advice to wheter or not the monitor is broken or i just need to press a button.

Contact the leptop's manufacturer for warranty support; it sounds like the display's back-lighting has failed. This is generally a factory-repair, and the entire lid/display will have to be replaced.
