I'm stable!

Thanks a million.

Thanks so much for your response to my plea for help.

I couldn't get all the way IN in safe mode, so I undid my system restore.
Here are error and warning messages from the event viewer.

Application:

Windows saved user SUSAN\Susan Johnson registry while an application or service was still using the registry during log off. The memory used by the user's registry has not been freed. The registry will be unloaded when it is no longer in use.

This is often caused by services running as a user account, try configuring the services to run in either the LocalService or NetworkService account.

Access Database\
does not exist.

Windows cannot load the locally stored profile. Possible causes of this
error include insufficient security rights or a corrupt local profile. If
this problem persists, contact your network administrator.

Windows was unable to load the registry. This is often caused by
insufficient memory or insufficient security rights.

DETAIL – Error performing inpage operation. for C:\Documents and
Settings\Susan Johnson\ntuser.dat

Failed auto update retrieval of third-party root list sequence number from:
<<http://www.download.windowsupdate.com/msdownload/update/v3/static/trustedr/en/authrootseq.txt>>
with error: This operation returned because the timeout period expired.

Windows cannot find the local profile and is logging you on with a
temporary
profile. Changes you make to this profile will be lost when you log off.

SusieQ

Hi SusieQ,
Try to Start in Safe Mode by tapping the F8 on start and you will be presented with the Boot up options select Safe Mode. On Safe Mode while you are in assuming you got it right, try to scan for malwares and Viruses on your computer. Then Look in the Event Viewer for any Error Messages to do

RE: can't restart after system restore

RE: can't restart after system restore

that follow these

steps:

1– Open a Run command by clicking on Start >> Run and

type in: eventvwr

click [OK] on the Event Viewer you will see three options

under local Machine:

Application

Security

System

click on each and see if you will see warning or Error

Messages (X) double

click it to get more information about it and copy and paste

the error and

post it in your next message.

HTH.

Please let us know.

Regards,

nass

Hi SusieQ,

First try to uninstall the iTunes/Apple software from your system and run a scan for malwares and Viruses and see if you could get stable.

If not try these steps:

1– Try to Create a new Profile and see if that will help, if creating a new profile helped try to copy your data from the Old profile to the new one and Delete the old corrupted profile.

On how to create a new profile read this:

<http://support.microsoft.com/kb/811151>

If still no joy try to do a Reinstall/Repair to your system after backing up your Data to a removable Storage (CDs,DVDs or Zip,USB) and try to read these steps:

<http://www.michaelstevensstech.com/XPrepairinstall.htm>

P.S How old your machine and what make the motherboard?.

HTH.

Please let us know.
